Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	Click Url
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	FastAPI, Streamlit
Key Features Implemented	User Authentication, Event Description Analysis, AI Conversation Starter Generation, Personalized Networking Recommendations, Fact Verification (Wikipedia API), Conversation History & Feedback
Pending / Incomplete Features	Advanced Networking Analytics Dashboard, Real-time Chat Integration (Future Enhancement)
Setup / Run Instructions	Clone the repository, install the required dependencies, configure the environment variables and API keys, then run the FastAPI backend and Streamlit frontend application.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The Personalized Networking Assistant is successfully developed using FastAPI, Streamlit, DistilBERT, GPT-2, and the Wikipedia API. The project follows a modular architecture with meaningful naming conventions, proper documentation, and robust error handling. Version control is managed through GitHub, ensuring maintainability and collaboration. The application is fully functional and satisfies the defined project requirements by providing AI-powered conversation generation, personalized networking recommendations, fact verification, and conversation history management.
