

Scalability & Future Plan

Date	04 July 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the **Personalized Networking Assistant** can be scaled to support a larger number of users, process more networking events, and provide advanced AI-powered features. It also presents the roadmap for future enhancements that will improve personalization, performance, and overall user experience.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Internet dependency for AI services	AI-powered conversation generation and fact verification require an active internet connection.	High
2	AI model processing time	Large or complex event descriptions may slightly increase response time.	Medium
3	Limited personalization	Recommendations are currently based on user input and conversation history only.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of concurrent users	Upgrade hosting resources and implement load balancing
2	Data Storage	Minimal User data storage	Integrate cloud database for scalable data management
3	Performance	AI Response Depends on API	Implement caching and optimize backend processing
4	Security	Basic API Key Protection	Add advanced authentication and enhanced security measures

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	User Authentication & Profile Management	3 months	Secure access and personalized user experience
Phase 3	Progress Tracking & Learning	6 months	Monitor student performance and learning progress
Phase 4	Multi - Learning Support	9 months	Improve accessibility and support diverse learners
