

Project Initialization and Planning Phase

Date	30 June 2026
Team ID	
Project Title	Personalized Networking Assistant
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposed solution aims to improve professional networking by leveraging Artificial Intelligence to generate personalized conversation starters, recommend relevant discussion topics, verify shared information, and maintain conversation history. The solution enhances networking confidence, communication quality, and relationship building using DistilBERT, GPT-2, and the Wikipedia API.

Project Overview	
Objective	The primary objective of the Personalized Networking Assistant is to help students and professionals build meaningful connections by generating personalized conversation starters, recommending relevant discussion topics, and providing AI-powered networking assistance.
Scope	The project focuses on improving networking experiences using Artificial Intelligence by analyzing event descriptions, generating conversation starters, verifying information, and maintaining conversation history for future interactions.
Problem Statement	
Description	Students and professionals often struggle to initiate meaningful conversations at networking events due to a lack of confidence, limited knowledge of relevant discussion topics, and insufficient preparation. Existing networking platforms provide connections but lack personalized conversation guidance.
Impact	These challenges reduce networking effectiveness, limit professional opportunities, and decrease user confidence. Addressing these issues can improve communication skills, strengthen professional relationships, and enhance networking success.
Proposed Solution	
Approach	The solution uses DistilBERT to analyze event descriptions, GPT-2 to generate personalized conversation starters, and the Wikipedia API to verify facts shared during conversations. FastAPI manages backend services, while Streamlit provides an interactive user interface.

Key Features	• AI-powered Conversation Starter Generator • Event Description Analysis • Personalized Networking Recommendations • Fact Verification using Wikipedia API • Conversation History & Feedback Management

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
	Computing Resources	Intel/AMD Multi-Core Processor
	Memory	8 GB RAM
	Storage	512 GB SSD or higher
Software		
	Frameworks	FastAPI
	Libraries	Transformers, PyTorch, Wikipedia API, Requests, Pandas
	Development Environment	VS Code, Python 3.x
Data		
	Data Source, Size, Format	Event descriptions, user profiles, conversation history, Wikipedia API data
