

Performance Testing

Date	27 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Functional & Performance Testing
Target Module / API	Personalized Networking Assistant API
Test Environment	Local FastAPI Server / Streamlit Application
Test Date	27 June 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User Authentication	1	30	User login completed successfully
2	Event Description Analysis	1	30	Event successfully analyzed and key topics extracted
3	Conversation Starter Generation	1	30	AI-generated conversation starters displayed successfully
4	Fact Verification	1	30	Facts verified successfully using the Wikipedia API

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.8 sec	Pass	Fast Response
2	Response Time (Max)	< 5 seconds	3.5sec	Pass	Within Limit
3	Throughput (Req/sec)	5 Req/sec	5 Req/sec	Pass	Stable Performance
4	Error Rate	< 1%	0%	Pass	No critical errors
5	CPU Utilization	< 80%	45%	Pass	Normal Usage
6	Memory Utilization	< 80%	55%	Pass	Stable Memory Usage

Step 4: Observations & Analysis

Key Findings

The Personalized Networking Assistant successfully handled user requests and maintained stable performance during authentication, event analysis, AI conversation generation, and fact verification.

Bottlenecks Identified

A slight delay was observed while generating AI-powered conversation starters due to external AI model processing and Wikipedia API response time.

Optimization Steps Taken

Optimized API request handling, improved caching of frequently accessed data, and streamlined communication between the FastAPI backend and AI modules to reduce response time.

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

 Event Details

Event Title

AI Innovation Summit 2026

Event Description

The AI Innovation Summit 2026 brings together AI researchers, software engineers, machine learning experts, cloud architects, data scientists, and technology enthusiasts. The event includes keynote speeches, panel discussions, technical workshops, networking sessions, startup showcases, and career guidance. Participants will explore Artificial Intelligence, Machine Learning, Generative AI, Cloud Computing, Data Science, and automation while connecting with industry professionals.

 Networking Conversation Starters

- ✓ 1. What inspired you to work in Artificial Intelligence?
- ✓ 2. Which AI project are you currently working on?
- ✓ 3. How do you think Generative AI will change software development?
- ✓ 4. Which AI tools or frameworks do you use most often?
- ✓ 5. What skills should students develop to build a career in AI?

Verified

Artificial intelligence (AI) is the capability of computational systems to perform tasks typically associated with human intelligence, such as learning, reasoning, problem-solving, perception, and decision-making. It is a field of research in engineering, mathematics and computer science that develops and studies methods and software that enable machines to perceive their environment and use learning and intelligence to take actions that maximize their chances of achieving defined goals. High-profile applications of AI include advanced web search engines, chatbots, virtual assistants, autonomous vehicles, and play and analysis in strategy games (e.g., chess and Go).
