

Technology Stack

Date	30 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	Streamlit, HTML, CSS	Creates an interactive and user-friendly interface for networking assistance.

2	Backend / Server-Side <i>(e.g., Node.js, Python/Django, Java)</i>	FastAPI (Python)	Handles API requests, user authentication, and application logic.
3	Database / Data Storage <i>(e.g., MySQL, MongoDB, PostgreSQL)</i>	SQLite	Stores user profiles, conversation history, networking preferences, and feedback securely.
4	Cloud / Hosting / Deployment <i>(e.g., AWS, Azure, Heroku, Docker)</i>	Local Server / Streamlit Cloud	Manages source code, version control, and collaboration among team members.
5	Version Control & CI/CD	GitHub	Generates answers, summaries, quizzes, and explanations.

	<i>(e.g., GitHub, GitLab, Jenkins)</i>		
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	DistilBERT, GPT-2, Wikipedia API, VS Code	DistilBERT extracts event themes, GPT-2 generates personalized conversation starters, Wikipedia API verifies facts, and VS Code is used for development.
